

STARTSCALE

The Beginner Business & Services Guide

A practical starting point for choosing a service, creating an offer, finding customers, and building a simple online business.

START WITH	One useful service or product
SERVE	A specific type of beginner or small business
BUILD	A simple offer, page, process, and way to get customers

1. Choose what you will help people with

StartScale is built around one idea: **make complicated things easier for beginners**. You do not need to teach everything. Start with a few areas you understand and can explain clearly.

Possible areas: websites, social media, Canva/design, digital products, freelancing, AI tools, productivity, resumes/portfolios, marketing basics, business organization, pricing, and online setup.

Pick an audience you can understand. For example: beginners starting a small business, creators who need help organizing their content, or people who need a simple online presence.

2. Turn the skill into a service

A service should answer three questions: **Who is it for? What will you do? What will they receive?**

Service	What the customer gets
Website Starter Setup	A simple landing page, mobile layout, basic sections, and launch help.
Social Media Setup	Profile optimization, bio, content direction, and starter ideas.
Canva Design	Custom posts, flyers, presentations, or reusable templates.
Digital Product Setup	Help turning information into a polished guide, checklist, or template.
AI Workflow Setup	A beginner-friendly workflow for using AI tools for specific tasks.

3. Create beginner-friendly digital products

Digital products can support your services and give customers a lower-cost way to start.

Ideas include:

- Website Launch Checklist
- Social Media Content Planner
- Business Idea Workbook
- Canva Starter Templates
- Digital Product Planner
- Client Intake Form
- Pricing Worksheet
- AI Prompt Pack for Beginners
- Freelance Starter Kit

4. Build a simple website

Your homepage should quickly explain what StartScale does. A simple structure is:

Headline → What you help with → Services → Guides → Templates → About → Contact

Every service should have a clear description, what is included, starting price or quote option, and a way to contact or purchase.

5. Get your first customers

Focus on being useful rather than aggressively selling. Create short tips that solve beginner problems, show examples of your work, and direct interested people to your service page.

Example message: “Hey! I noticed you’re getting started with _____. I help beginners set up _____. If you want, I can show you what I would recommend for your setup.”

6. Create a repeatable service process

Step	What happens
1. Inquiry	Customer explains what they need.
2. Scope	You confirm exactly what you will provide.
3. Payment	Customer pays before work begins, when appropriate.
4. Work	You complete the agreed deliverables.
5. Review	Customer checks the result and requests agreed revisions.
6. Delivery	Final files, links, or instructions are delivered.

7. Price simply at the beginning

You can start with small packages and raise prices as your work, results, and demand improve. Example starting ranges:

Offer	Example starting range
Small design/template job	\$25–\$75
Social media setup	\$50–\$125
Website starter setup	\$75–\$200
Digital-product setup	\$75–\$200
Custom business setup	\$100–\$250+

8. Your 7-day StartScale launch plan

- Day 1 — Choose your main audience and 2–3 areas you can help with.
- Day 2 — Create one service and define exactly what is included.
- Day 3 — Create one digital product or template.
- Day 4 — Finish your website service/product pages.
- Day 5 — Create three useful beginner tips for social media.
- Day 6 — Reach out to relevant potential customers and communities.
- Day 7 — Review questions and feedback, then improve your offer.

The StartScale rule

Start small. Be useful. Make the process simple. Improve from real feedback.

StartScale is not about promising overnight results. It is about giving beginners practical information, useful tools, and hands-on help they can actually use.

StartScale • Beginner-friendly • Practical • No fluff
